Priya Sharma

Staff Software Engineer

priya.sharma@example.com +44 7700 900123 London, United Kingdom
github.com/priyash www.priya.dev

Summary

Staff engineer building reliable, efficient distributed systems for fintech and logistics teams across Europe. Comfortable with C++ & Rust; I write about <design docs> and costs (~$5 vs ~$9 per run). Notes: 1. not a list; # not a heading; *stars* and _underscores_ stay literal, as do `backticks` and [brackets]. “Smart quotes” and it’s fine; naïve café résumé façade; the office workflow is efficient and fluffy.

Work Experience

Staff Engineer, *Acme Corp* Sept 2021 – Current • London, UK

- Led the **payments platform** rewrite in **Rust**, cutting p99 latency from 480ms to 95ms across 30+ services; see the engineering blog post.
- Designed a multi-region **Kafka** event backbone handling 2.5M events/s with exactly-once delivery, idempotent consumers, replay tooling, schema evolution rules and automated failover drills run every quarter.
- Mentored 12 engineers; 4 promoted to senior. Ran the architecture review board and wrote the org-wide guidelines for on-call, incident reviews and service ownership.
- Introduced contract testing between 40 services, reducing integration incidents by 60% year over year.
- Built the internal developer portal used by 400+ engineers for service scaffolding, docs and ownership data.

Senior Software Engineer 06/2018 – 08/2021

Globex Ltd, Manchester

Globex builds logistics software for 300 warehouses in the UK and Ireland.

– Owned the routing engine (Go, PostgreSQL); reduced fuel costs by 11% for the largest customer through better batching.

– Shipped a real-time tracking API consumed by 5 partner apps, with rate limiting, OAuth 2.0 scopes, versioning and a public changelog.

Globex Ltd

Software Engineer 2016 – 2018 | Manchester

- Built warehouse scanning tools in TypeScript and React Native.

Graduate Engineer Sep 2015 – Jun 2016 | Manchester

- Rotated through QA, platform and mobile teams.

Contract Developer, Initech — Jan 2015 – Aug 2015 (8 mos)

- Delivered a reporting dashboard for 3 retail clients.

Research Intern, *Hooli Labs* May 2014 – Aug 2014 | Remote

- Prototyped a log-structured storage engine and benchmarked it against RocksDB and LevelDB on write-heavy

workloads, compaction strategies, bloom filter sizing and read amplification under mixed load; wrote up results for the team.
- Presented findings at the internal research day.
- Wrote the benchmark harness that the storage team still uses to compare engines on every release, covering throughput, tail latency, space amplification and recovery time after crashes.

Projects

cvgen — turns a PDF résumé into a website 2024

- Used by 1,200 people; 900+ stars on GitHub.

Education

MSc Computer Science 2013 – 2014 | Leeds, UK

University of Leeds

Distinction; dissertation on consensus protocols

University of Mumbai

B.Tech, Information Technology 2009 – 2013

Skills

Languages: Go, Rust, TypeScript, Python (3.x), C++, Java, Kotlin, SQL, Bash, and a little Haskell for fun on weekends

Cloud AWS (Lambda, ECS, DynamoDB), GCP, Kubernetes, Terraform

Practices: TDD; trunk-based development; SRE · observability

Languages

English (Native), Hindi (Fluent), German – Basic

Certifications

AWS Solutions Architect – Professional, Amazon Web Services Mar 2023
